

Dear M/S Towel Manufacturer Association

I hope this email will find you in good health and business.

Untrained employees lack the motivation and knowledge to use the company resources properly, which lead to waste, reflects badly on the business and affects the bottom line; resultantly employees, company as well as clients all suffer. For example, over 10 years operating, a typical industrial air compressor can accumulate upto Rs 153,000,000/= in electricity costs (<https://www.quincycompressor.com/cost-of-compressed-air/>). Therefore, reducing the manufacturing cost from compressed air has become very essential and through well trained employees there is potential of reducing energy costs in compressed air by 10-50% in most of the industries.

National Textile University (NTU), Faisalabad has joined hands with AIIA Trainings to provide knowledge and tools needed to reduce the operating costs associated with capacity utilization of workers, Quality, Productivity, Bottlenecks in Supply Chain, HR Leadership, Team Building and Management Techniques to improve the overall reliability of the entire production system.

The detail of all the trainings under this program are available at www.aiaa.com.pk and a copy of the **training schedule and course details are also attached below** for your perusal. All these trainings are delivered by OEM trained professionals, international agencies consultants and experience trainers. Please nominate your technical staff to benefit from these trainings. In case of any query or further assistant, please feel free to contact the focal person:

Mr. Asif Rasheed
Manager Training
training@aiaa.com.pk
